<b>Office Action Summary</b>	<b>Application No.</b> 10/821,617	<b>Applicant(s)</b> GRAY ET AL.	
	<b>Examiner</b> Anitza M. San Miguel	<b>Art Unit</b> 3733	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

## **DETAILED ACTION**

### ***Drawings***

The drawings are objected to because Figure 3b makes reference to Figure 3b ("a temporary fixation device of Fig. 3b). The description should refer to Figure 3a.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Specification***

The disclosure is objected to because of the following informalities:

In page 14, line 4, "the rod" was disclosed previously with reference character "102". Reference character "101" refers to "the spinal implant". In line 18, reference "26" describes "the contour" and "driver engagement region" (page 10, line 5).

In page 15, line 16, "handle 150" should be changed to "handle 201" since it is referring to the anti-torque arrangement handle.

Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Bryant et al. (Reference U.S. "5,649,931").

Bryant et al. discloses a spinal surgical instrument comprising: an outer cannula having a proximal end, distal end and an outer lumen passing therebetween, the distal end of the outer lumen configured to releasably mount to a securing arrangement for a spinal implant; an inner cannula having a proximal end, a distal end and an inner lumen passing therebetween, the inner cannula being axially moveable within the outer lumen of the outer cannula; a fixing member having a proximal end and a distal end, the fixing

member positioned within the inner lumen and including an arrangement for advancing and retracting the fixing member within the inner lumen of the inner cannula (see Figure 1 and 2).

The inner cannula is axially moveable within the outer lumen of the outer cannula for a predetermined distance between a first position and a second position. The distal end of the outer lumen is configured to releasably engage a locking nut. The outer cannula includes an exterior surface contour to facilitate gripping of the outer cannula. The distal end of the inner lumen includes an axially directed shoulder that can abut against a proximal end of the spinal implant (see Figure 1 and 2).

### **Allowable Subject Matter**

Claims 5, 7, 8-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Jackson; and Dunbar, JR; are cited art of interest.
